

Idea: $\frac{1 \text{ sec}}{1 \text{ step}} \times 60 = \frac{1 \text{ min}}{1 \text{ km}} \times 60 = \frac{1 \text{ h}}{1 \text{ m}}$

step by that
displays secs as
steps, min as km,
hours as a marathon

Example 2 hour 30 min 20 sec

1 mar : 30 km : 20 steps

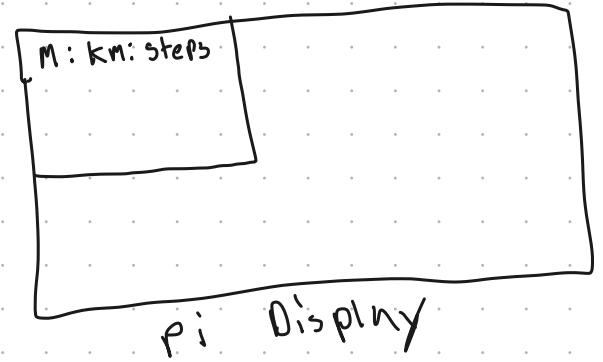

metaphor:
telling time on clock

Model:

- Timing
- Packets?

Display

Error:

- Wrong conversion

Scenario:

- Ayo goes on a run where she takes 2 step a sec

task

Run Python Script

control
pi after
python script
